**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-27, and 47-48, drawn to an immunomodulatory polynucleotide comprising an immunostimulatory sequence (ISS), classified in class 424, subclass 184.1.
  - II. Claims 28-46, drawn to methods comprising administering an immunomodulatory polynucleotide to an individual, classified in class 435, subclass 455.

The inventions are distinct, each from the other because of the following reasons:

2. Invention I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the immunostimulatory polynucleotides of invention I can be used in methods materially distinct from the methods of invention II. For instance the polynucleotides of invention I may be used in hybridization methods, wherein the target nucleic acid comprises a sequence that is complementary to the polynucleotides of the invention.
3. Furthermore, claims 2-4, and 6-8 recite polynucleotides comprising a sequence selected from the group consisting of SEQ ID NO: 1-2, 18-19, 35-36, 67-80, 83-96, and 132. Since these claims are drawn to nucleotide sequences of more than ten individual, independent, and distinct sequences in alternative form, these sequences are thus deemed to normally constitute independent and distinct inventions within the meaning of 35 U.S.C. 121 and 37 CFR 1.141 et

seq. Accordingly, in most cases, only one (1) independent and distinct nucleotide sequence will be examined in a single application without restriction. The search of no more than one sequence may include the complements of the selected sequences and, where appropriate, may include subsequences within the selected sequences. Thus with the election of invention I, as set forth above, Applicant is required to selected one polynucleotide sequence selected from the group consisting of SEQ ID NO: 1-2, 18-19, 35-36, 67-80, 83-96, and 132.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
